SUMMARY

Information Technology undergraduate with a growing interest in full-stack web technologies and machine learning. Currently exploring modern development tools and frameworks through academic and personal projects while strengthening my programming and problem-solving skills. Eager to learn, take on new challenges, and contribute to meaningful projects in a collaborative environment.

SKILLS

Programming Languages: C, Java, Python, JavaScript, Oracle SQL

Web Development: HTML5, CSS3, Django, React.js, Node.js, Express.js, REST APIs

Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Computer Systems.

Machine Learning: Scikit-learn, Pandas, NumPy, Data Preprocessing, Exploratory Data Analysis (EDA)

Developer Tools & Platforms: Git, GitHub, VS Code, Postman

EDUCATION AND TRAINING

Bachelor of Technology in Information Technology

Expected July 2028

Manipal Institute of Technology, Manipal, Karnataka

Leadership & Activities

- Management Committee Member, Manipal Information Security Team (MIST)
- Management Committee Member, HackerRank Campus Club, Manipal

PROJECTS

Parivaahan github.com/Muizzahmed786/DBS_Project

Developed a full-stack vehicle and e-challan management system featuring secure authentication, role-based access control, licence issuance, challan payment processing, and administrative dashboards. Built using modern web technologies with a relational database backend.

Titanic Survival Prediction Model github.com/suraj14611/Titanic_prediction_model

Built a machine learning model using Python, Pandas, NumPy, and Scikit-learn to predict passenger survival on the Titanic dataset. Performed data preprocessing, exploratory data analysis, feature engineering, model training, and evaluation using classification performance metrics.

AI Web Scraper github.com/suraj14611/Ai_web_scrapper

Developed a full-stack AI-powered web scraping platform featuring a strictly decoupled architecture, asynchronous Playwright-based automation with anti-detection evasions, and both direct and agentic (LLM-driven) content extraction modes. Built using modern web technologies with support for multi-format data export and a relational database backend (PostgreSQL with SQLite fallback), fully containerized with Docker for streamlined deployment
